

## AN EDUCATION THAT TRULY MATTERS

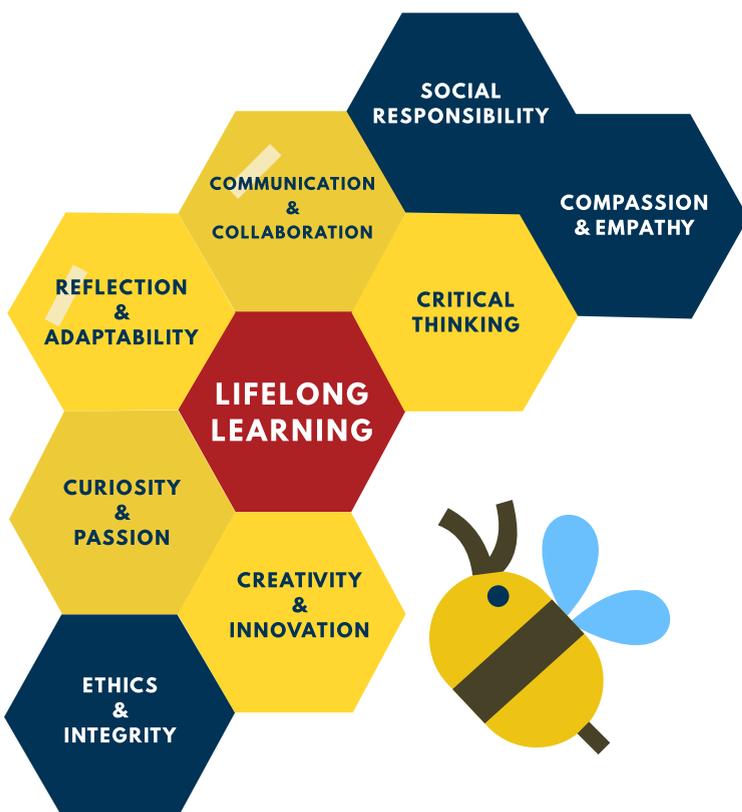

In a world that is transforming at an unprecedented rate, the uncertainty that the future holds has increased exponentially. For the uncertain world of tomorrow, we envision to evolve education today and create an ecosystem that focuses on providing an education that truly matters. At Learners, we follow a New-Age Educational Model backed by International Curricula to help our children acquire essential real-life skills and develop the mindset of a lifelong learner so that they can thrive in their lives even through these rapidly changing times. We are not just a school but a community of lifelong learners with a mission to provide an evolved education, an education that truly matters!

# THE LEARNERS COMMUNITY:

## Culture of Learning and Culture of Community

The Learning Hive represents the foundation of our Community of Lifelong Learners, that is rooted in a Culture of Learning and a Culture of Community.

*As Aristotle said, true excellence both intellectual & moral, comes through habit, habit comes through action and action is driven through culture.*

We believe that through the Culture of Learning, a child naturally develops a learner's mindset, which is carried on for life.

Through the Culture of Community, essential traits of being human can be naturally inculcated in young learners.

# OUR EDUCATION MODEL

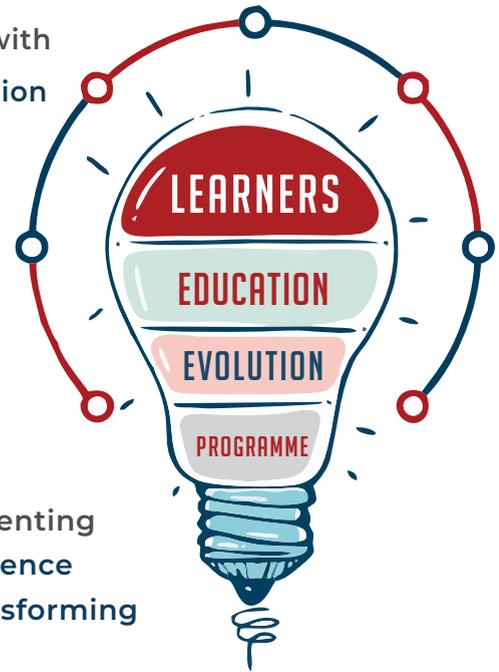

## **Learners Education Evolution Programme (LEEP)**

Education needs to evolve, now more than ever. Conventional education systems of memorising and reproducing information expect children to operate like machines.

This new age of artificial intelligence and automation can come with a palpable lack of humaneness, which calls for an evolved education programme that helps children develop the mindset of a lifelong learner and brings them closer to their innate human traits.

LEEP - Learners Education Evolution Programme - is a new age education model that entails a cohesive curriculum for essential real life-skills along with standard subjects of literacy, numeracy and sciences delivered through International Curricula.

It also focuses on discovering, adopting, inventing and implementing the best pedagogical practices to deliver an educational experience that today's generation needs and deserves for the rapidly transforming world of today and tomorrow.

## **International Baccalaureate and Cambridge Assessment International Education:**

In today's time, with a globally connected world, our children need an education that's truly international in its approach and gives them a global perspective.

IB and Cambridge are progressive and flexible boards that focus on skill building, and seek to create a global community through their best practices while also enabling learners to act locally in their immediate environments.

# LEEP

# WHY LEARNERS ?

1

Where children

are Learners,

not just Students:

A student is limited to schooling, but a learner is for life. We empower children to become Lifelong Learners by nurturing a Learner's mindset.

2

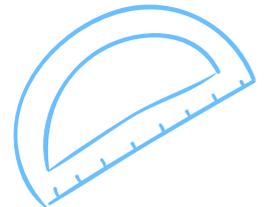

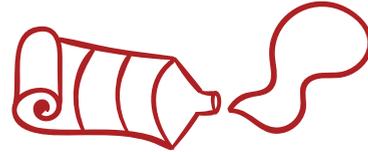

Where Teachers

are Facilitators, not

Instructors:

At Learners, every teacher aims at engaging with children, not by instructing them, but through facilitating their learning process, by providing the necessary environment & resources, monitoring progress, and encouraging learners to become problem solvers.

### 3 Where Experience is more important than Information:

In today's time, when information is available in abundance, it's important to learn how to use this information, which can only come through practical & hands-on experience. Hence, at Learners, we follow a cyclic process of learning through thinking, doing, understanding, and reflecting, in order to make learning experiential.

### 4 Where children are Makers, not just Takers:

The conventional education system pushes children to just take in information through bland lectures and instructions, which in turn forces a child to develop a taker mindset. When children ask questions and find answers for themselves, they get involved and navigate their own learning process, which helps them develop the mindset of a maker.

## 5 Where children focus more on How to Think & How to Learn than What to Think & What to Learn:

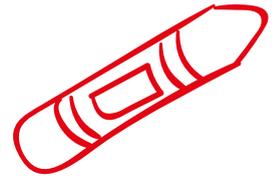

For this new age, amidst this all-encompassing technological renaissance, we need an evolved education programme. Conventional education systems focus on what to learn, but what our children learn today won't be relevant tomorrow. Hence, at Learners, we help our young learners develop the skills of thinking & learning.

## 6 Where School is a Community, not a Service Provider:

As a part of the social system, a school reflects both the intellectual & social needs of the world. We are a community of lifelong learners where children, parents, and educators are essential members working hand in hand to cultivate both the curious and the compassionate side of young learners.

## JOIN THE COMMUNITY

We are inviting registrations for young learners to step into the world of Lifelong Learning. To take this journey forward you can fill in the online enquiry form or write to us at [letsconnect@learners.international](mailto:letsconnect@learners.international) and we will be happy to assist you.

Campus tours are organized regularly for parents and young learners to meet our team members and know more about our curriculum, pedagogy, and thoughtfully designed infrastructure.
